#### PVC PIPE WITH COMPRESSED AIR CAN EXPLODE

by Richard Ducote

(reprinted from the Arizona Daily Star, Vol. 147, #329 [November 24, 1988])

State safety officials have issued a "hazard alert" against the use of PVC pipe to carry compressed air. Arizona Division of Occupational Safety & Health officials say they know of no injuries in Arizona from exploding plastic pipe, but they want to prevent such incidents.

Experts in other states report that PVC pipe used for compressed air or gases can "explode like a bomb, sending shards of plastic flying" in all directions.

The hazard alert warns that using "unprotected plastic (PVC) piping to transport compressed air and other compressed gases in aboveground installations" is prohibited.

Officials of the agency are warning pipe suppliers, retailers, and businesses of the PVC hazard in hopes of averting the injuries reported in several states.

Manufacturers of polyvinyl chloride pipe have warned against such uses for nearly two decades.

Tim Arbogast, director of the Safety Division, said his agency will have consultation and training programs for employers and also will conduct unannounced inspections to ensure compliance with manufacturers' specificiations for PVC pipe.

Arbogast said suppliers and retailers are cooperating with the program to warn buyers of PVC pipe against using the product to transport compressed gases. Employers in serious violation of the product prohibition could be subject to fines ranging from \$200 to \$1,000, he said.

Another problem associated with PVC pipe in all uses is its tendency to "sunburn," or deteriorate and become brittle after exposure to the ultraviolet rays of sunlight, Arbogast said.

#### ON THE ROAD

#7: OF CATS, BACKROADS AND PARADOXICAL SHOPS by Peter Good

Berkeley Springs, West Virginia.
On my way to meet woodworker Bert Lustig, I had no trouble finding the correct exit from the interstate or for the next two or three miles, but then mild doubt began to set in. Even though Bert had given me detailed directions over the phone, being a metropolitan area dweller, I sometimes have a bit of trouble with directions based almost entirely on landmarks rather than street names. "Take the third dirt road on the left and after about six miles look for a small church on the right. Go another half mile until you come to a pasture which might have some horses in it. Then take the right fork which looks kind of like a logging road. After another seven miles......". As I passed the scenery, I tried to imprint various landmarks in my memory so I could find my way back, knowing that the map was useless here. Sometimes, security is a 6-lane well marked freeway.

Eventually, I found what appeared to be the place I was looking for, and even though I wasn't expecting anything in particular, somehow it didn't match my concept of a woodworker's headquarters. I was looking at a small, unpretentious older house in a very woodsy area that could have been a hundred miles from anywhere and was, in fact, quite a few miles from anything shown on the map. I figured this must be the place, however, because I hadn't seen any other house for some distance. There was no paved driveway, no landscaped yard; everything looked kind of.....natural, which is a diplomatic way of saying uninhabited. Other than a generous supply of cats, there was no sign of life. I knocked on the well worn screen door and sure enough, out came Bert to greet me. He lived here with his ten cats. The modest house was the kind in which you instantly feel comfortable because one glance around tells you a whole story about the person who lives there. One wall in the living room was devoted to a neat display of an extensive collection of antique axes. Shelves upon shelves of books, along with several comfortable chairs with reading lamps alongside attested to the fact that this person did a lot more with his time than saw wood. It turned out that Bert is also a college instructor who teaches classes in woodworking and the history of crafts. He is also a diverse and accomplished woodworker, turning being one of his specialties. The evidence of this was everywhere in the house in the form of lamps, bowls and platters. He also hand carves many cooking utensils such as spoons.

The kitchen looked like it could use a bit of organizing and there were cat dishes in abundance. All in all, however, the place was quite homey. But there was no workshop anywhere. When I asked about this, Bert told me that his shop was "down the lane a ways" and offered to show it to me. I accepted, of course, since I've never been one to turn down shop tours. The "lane" was a dirt path through the woods barely wide enough for one car. After what seemed like a considerable distance, I was settling into a fantasy about early American frontier life when suddenly the shop appeared in a clearing. It would be an understatement to say that I was astonished. In the middle of nowhere was this modern white two story triangular building with a soaring roof and jutting angles that would make a cubist faint and a futurist glow with admiration. We entered on the second floor, which was devoted entirely to lumber storage, and was as neat and clean as if it were a retail wood dealership. The lower level was the shop itself and was quite an interesting mixture of the old, the new and the handmade. In one area, several major pieces of equipment, all of

Parkmead Products 930 45th Ave. Oakland, CA 94601 532-5931 which were quite old and which Bert had rebuilt, were powered by wide leather belts connecting them to a long central driveshaft operated by a large electric motor. This was juxtaposed with a couple of very new machines which somehow I didn't expect to find out here in the woods. Sort of like discovering a credit card pay phone in the Amazon jungle. The work tables and benches were all homemade out of oak. So was the floor. I remarked about the extensive use of oak and Bert explained that in this part of the country it was so common that it was often used as a utility wood, even to the point of making oak railroad ties. I briefly entertained the thought of renting a flatbed truck and hauling a load of oak to California for resale but decided that was not what I was here for.

Bert Lustig works alone and I would consider his shop to be quite large for one person. But then again, there seemed to be ample space available in this neck of the woods. He gave me a good tour of his shop, pointing out with pride his newest acquisition, a shining 24" thickness planer. "I bought this instead of a new car", he said. Another thing that I thought was interesting was a fan powered ventilation system designed to clear the air by drawing airborne sawdust away from the operator of a machine and out of the building. The thing that made it different was that it operated locally at various pieces of equipment without removing air from the entire shop. Another thing that impressed me about this shop was that it was very clean despite the fact that several projects were in progress. The cleanliness was due in no small part to the localized ventilation system. There was also very good natural lighting, with windows located adjacent to the major workstations. Bert had designed and built this building himself and had taken care to incorporate in it many features that were important to him. It's also one of the nicer shops I've seen.

Bert's hopes for the future are to get more involved in teaching woodworking skills to others while pursuing turning as the main thrust of his own work. He enjoys working in his isolated shop, but also wants to balance this with the stimulation of the city and with an increased affiliation with colleges and universities as an instructor. But then, this raises the question of who will take care of all those cats. So many decisions. I really enjoyed my visit with him, and even managed to find my way back to the interstate. A part of me wanted to linger in that tranquil setting with no rushing cars or ringing phones, but I had other things cut out for me and I was on my way to see another woodworker in Wisconsin, but that's a whole other story.

WE DELIVER

4801 Tidewater Ave., Oakland

Nimitz Fwy to High St.

Bay Area Woodworkers Association was formed early in 1982 by a small group of dedicated people who felt the need to strengthen the woodworking community by holding regular meetings, establishing an informal forum for the exchange of knowledge and ideas, sponsoring shows, and meeting others in woodworking and related fields. Since then, this non-profit organization has grown to many members. Meetings occur in the third week of each month at 7:00 p.m. and are generally held in San Francisco or Oakland/Berkeley area. Meetings usually have a specific topic such as router techniques, finishing, turning, business aspects of woodworking, or focus on a distinguished guest speaker who will give a presentation in their area of expertise. Most meetings are held in members shops, or the place of business of a guest presenter. Members receive a monthly newsletter. newsletter. Dues are \$30 per year payable in January, \$22.50 payable April -June, \$15.00 payable July-September, \$7.50 payable Oct.-December. Mail your check and the information below to: BAWA, c/o Norma Brooks, 4973 Elrod Dr. Castro Valley, Ca. 94546.
